Diploma in Software Quality Assurance (QA)

Quality Assurance (QA) is one of the most important areas in the world of information systems development. Against this background, the software testing profession has evolved to ensure that during the system development, continuous work processes will be integrated that maintain stability and enable the evolving technology to function properly.

The work processes include planning according to structured methodologies, working according to work procedures and integrating testing tools and their application to work processes. It is important to implement these processes as part of an overall quality approach, as it ensures the survival and relevance of organisations in today's business environment. For this reason, the software testing profession has become one of the most sought-after professions in organisations.

Ireland is the 2nd largest exporter of computer and IT services in the world, with over 97% of domestic production sold in international markets.

The sector accounts for over €50 billion of exports from Ireland each year.

Course structure

Introduction

- Knowledge of the Computing World
- Introduction to LINUX Operating System
- Communications and Networks
- Introduction to Information Systems

Manual QA

- Introduction to the World of Software Testing
- Introduction to Software Quality Assurance
- ALM and Software Testing
- Types of Testing
- Software Testing Documents – The Stages of the Software Testing Process and Its Products
